

That was an exciting year!

We fulminantly started into 2015 with our books full. Eventually, we succeeded to realize gradient index profile multimode waveguides. A breakthrough in terms of crossing losses and fiber coupling efficiency, as well as, signal integrity and compact routings.

The capability to realize now optical functionalities such as directional couplers and interferometers with singlemode waveguides opens up new opportunities within the ICT and sensor markets. Customer requests within these fields of applications already led to development projects, among them two EU-funded projects. All this makes us very confident for 2016.

With this card, we would like to thank to you for your great support which helped us to further develop our company – Thank you!

In this spirit, we wish you Merry Christmas and Happy New Year!

Your vario-optics team.
